

## Dementia Road Map

We are developing a tool to assist primary care staff to more effectively support patients, families and carers presenting with cognitive impairment and memory problems.

The Dementia Road Map connects together high quality information about living well with dementia in a coherent and accessible structure that is easy to use. This can be customised to include information about local services and resources.

The work is funded by the Department of Health and involves the Royal College of General Practitioners (RCGP), the Alzheimer's Society and the Strategic Clinical Network for Mental Health, Dementia and Neurological Conditions South West.

The Dementia Road Map will be designed by GPs and other primary care staff.

We plan to launch the Road Map in May 2014 so that it can be adopted by Clinical Commissioning Groups across the country.
